Technical Field

The present invention relates to hand-held units for recording handwritten information.

Technical Background

There are a number of ways to communicate handwritten information electronically. One alternative is to write the information on a sheet of paper and thereafter to send the information via a fax machine. An alternative way of sending handwritten information electronically is to scan it in and to send it electronically via, for example, electronic mail or using the mobile telephone network. A disadvantage of both methods is that two steps are required to enter the handwritten text electronically. In a first step the user writes the text on a base and in a second step the handwritten text is converted into electronic format via optical reading in the scanner or the fax machine.

International Patent Applications WO 01/48591, WO 01/48678 and WO 01/48685 describe user units and methods for recording and communicating handwritten information electronically. A user unit of the type described in said WO documents has a memory in which the information that has been recorded by the user unit is stored. The user unit can be arranged to send information by wireless means to, for example, a mobile telephone or a personal computer, from which the information is forwarded to the correct recipient, typically via an
